for a proper definition of the invention and one in the art would fully understand the scope of the claimed invention. The amount of component (B) is functionally recited and those in the art would know what is intended thereby. Similarly, it is clear from the present claim language that a mixture of at least two of the specified hydrofluoroalkanes is used. The absence of specific numerical limits for (A) and (B) tells one that the invention is not dependent on the use of specific amounts. In other words, it is evident that the claims are intended to cover all compositions as claimed containing components (A) and (B) irrespective of the amounts of these components in the composition. One in the art, therefore, would have no problem determining the metes and bounds of the claims.

The Examiner is also requested to reconsider the Section 103 rejections, particularly in view of the amendments to the claims. McGraw et al '144 alone or McGraw et al '180 and Zehler et al do not disclose or suggest a composition as called for in amended claim 1 comprising (A) a heat transfer fluid comprising a mixture of at least two hydrofluoroalkanes selected from the group specified by the applicant and (B) a lubricant also as specifically defined in claim 1. Clearly, the applicant's specific combination of components is not obvious from any of the

references. Hence withdrawal of the Section 103 rejections is requested.

The Examiner's attention is called to the following disclosures:
